

Dev Ops Engineer | Dehradun

About TorcAI

TorcAI, a data science company and global provider of Audience Infrastructure and Programmatic solutions to advertisers, publishers, agencies and innovative technology companies. We provide highly customizable audience platforms, real-time trading systems with machine learning capabilities. TorcAI has provided technology solutions to enterprises in the AdTech and MarTech space enabling them to monetize data assets and bring in competitive technological advantage.

Our platform's strength lies in our ability to re-engineer complex ad and audience tech work flows and bring in efficiencies with an objective to meet business goals. Know more at www.torcai.com.

About Profile

As a DevOps Engineer you need to **work with developers and the IT Infrastructure team to oversee the code releases, combining an understanding of both engineering and coding.** From creating and implementing systems software to analyzing data to improve existing ones. As DevOps Engineer increases you need to contribute productivity in the workplace. Detailed management and monitoring of H/W, S/W platforms.

Roles and Responsibilities

- Documentation: Writes specifications and documentation for the server-side features.
- Systems analysis: Analyzes the technology currently being used and develops plans and processes for improvement and expansion. The DevOps engineer provides support for urgent analytic needs.
- Development: Develops, codes, builds, installs, configures, and maintains IT solutions.
- Project planning: Participates in project planning meetings to share their knowledge of system options, risk, impact, and costs vs. benefits. In addition, DevOps engineers communicate operational requirements and development forecasts.

tomorrow's tech, today.

- Testing: Tests code, processes, and deployments to identify ways to streamline and minimize errors.
- Deployment: Uses configuration management software to automatically deploy updates and fixes into the production environment.
- Maintenance and troubleshooting: Performs routine application maintenance to ensure the production environment runs smoothly. Develops maintenance requirements and procedures.
- Performance management: Recommends performance enhancements by performing gap analysis, identifying alternative solutions, and assisting with modifications.
- Management: Depending on the size of the organization, the DevOps engineer may also be responsible for managing a team of DevOps engineers.
- On Prem & Cloud – Infrastructure Management, Streaming data, Database, Back up, Restore, Business Continuity management.
